

Conflict Minerals

We get a lot of questions from our customers regarding Conflict Minerals (also known as 3TG).

The term "Conflict Minerals" refers to the extraction of four minerals - Tantalum (Ta), Tin (Sn), Tungsten (W) & Gold (Au) in the Democratic Republic of Congo and nearby countries. The production of these minerals is used to finance, directly or indirectly, armed groups in the area, who use violence against the local people as a means of warfare.

For more information please visit www.sourceintelligence.com/what-are-conflict-minerals/

As far as we know today, our investigations show that no conflict minerals are used in our products. We're continuing to work with our suppliers to ensure that no conflict minerals from the Democratic Republic of Congo or nearby areas will be present in our products.

Best regards
