

## **Reach 1907/2006.**

As a supplier of fasteners and similar products we have several materials and surface treatments in our product range.

It is essentially the amount of chromium 6+, and lead as an alloying element which are concerned.

Our studies show that no substance listed in the Candidate List of Substances of very high concern (<http://echa.europa.eu/en/candidate-list-table>) nor Substances restricted under REACH (<https://echa.europa.eu/substances-restricted-under-reach>) exceed the limit of 0,1 weight percent.

We have a continuous monitoring of the candidate list and if there will be any changes in the future we will immediately inform you.

Best regards

Techno Skruv i Värnamo AB
